DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-27, drawn to subject matter wherein functions contained within one or more executable code libraries (e.g., a dynamic link library or DLL) are called as needed at runtime by one or more application programs, classified in class 719, subclass 331.
 - II. Claims 28-49, drawn to subject matter comprising means or steps directed to executing jobs immediately after they are received by a system and occurring in groups (i.e., transaction processing), classified in class 718, subclass 101.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because transaction processing can be implemented without a dynamic link library. The subcombination has separate utility such as a computer program, which requires functions to be call as needed at runtime.
